## **DETAILED ACTION**

### ***Election/Restrictions***

1. Claims 25 – 29, 31 – 34, 36, 37, 41 – 45, 47 – 50, 52, 53 and 57 - 64 are directed to an allowable product. Pursuant to the procedures set forth in MPEP § 821.04(B), claims 57 – 62, directed to the another species of an allowable product, previously withdrawn from consideration as a result of a species restriction requirement, claims 57 – 62 are hereby rejoined and fully examined for patentability under 37 CFR 1.104.

Because all claims previously withdrawn from consideration under 37 CFR 1.142 have been rejoined, **the Species restriction requirement as set forth in the Office action mailed on June 11, 2004 is hereby withdrawn**. In view of the withdrawal of the restriction requirement as to the rejoined inventions, applicant(s) are advised that if any claim presented in a continuation or divisional application is anticipated by, or includes all the limitations of, a claim that is allowable in the present application, such claim may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application. Once the restriction requirement is withdrawn, the provisions of 35 U.S.C. 121 are no longer applicable.

See *In re Ziegler*, 443 F.2d 1211, 1215, 170 USPQ 129, 131-32 (CCPA 1971). See also MPEP § 804.01.

### ***REASONS FOR ALLOWANCE***

2. Claims 25 – 29, 31 – 34, 36, 37, 41 – 45, 47 – 50, 52, 53 and 57 - 64 are allowed.
3. The following is an examiner's statement of reasons for allowance:

The prior art of record does not teach or suggest, either singularly or in combination, at least a single molding compound without interfaces, encasing a semiconductor chip over a ball grid substrate; a heat spreader mounted over the ball grid substrate and spaced apart from the molding compound to form a gap; and attaching material within the gap at least between the heat spreader and the molding compound, the heat spreader has a shape of an inverted square pie tin having an elongated surrounding lip mounted over the ball grid substrate and the heat spreader has a surface exposed to a surrounding ambient, not contacting the mounding compound and the attaching material as set forth in claims 25 and 41. Masayuki et al. (U. S. Pub. No. 2001/0,004,131) teaches a semiconductor package on a substrate, a heat spreader mounted over the substrate and spaced apart from the semiconductor package to form a gap, and attaching material within the gap at least between the heat spreader and the semiconductor package. Takano et al. (U. S. Pat. No. 6,376,907) teaches a heat spreader having a shape of an inverted square pie tin with an elongated surrounding lip mounted over a ball grid substrate. However, Masayuki et al. and Takano et al. do not teach a single molding compound without interfaces, encasing a semiconductor chip over a ball grid substrate; a heat spreader mounted over the ball grid substrate and spaced apart from the molding compound to form a gap; and attaching material within the gap at least between the heat spreader and the molding compound, the heat spreader has a shape of an inverted square pie tin having an elongated surrounding lip mounted over the ball grid substrate and the heat spreader has a surface exposed to a surrounding ambient, not contacting the mounding compound and the attaching material as set forth in claims 25 and 41.
